TUNGSTEN AUTOMATION

Contract Compliance

Track obligations and enforce contract terms with AI-driven automation

Compliance data captured with no human input
80%

Avoided a headcount increase of
15%

Languages supported for contract capture
120+

Why

Government agencies manage thousands of contracts, from service agreements and grants to leases and panel arrangements. The terms that matter sit deep inside long documents: rates, milestones, insurance requirements, renewal dates and reporting duties. Officers find and check them by hand, so reviews are slow and errors slip through.

When nobody tracks those obligations, agencies pay above contracted rates and miss renewal windows. Audit and probity reviews then ask for evidence that takes weeks to pull together from email, spreadsheets and shared drives.

Tungsten Automation uses AI to read each contract and extract the clauses and values that drive compliance. Business rules check those values against agency policy and against the invoices that arrive later. Officers only see the exceptions, and every decision lands in a complete audit trail.

How

A Large European Bank faced a growing compliance burden across its trade finance documents, including letters of credit and guarantees. It needed faster compliance screening without adding staff.

The bank built its solution on Tungsten TotalAgility. The platform extracts hundreds of data fields from each document and runs sanctions and embargo screening automatically. The bank now captures **80% of its compliance data without human involvement** and **avoided a 15% increase in trade finance headcount**, while customers still receive fast turnaround.

Public sector contracts follow the same pattern. TotalAgility captures contracts from email, scanners or a contract management system. AI and generative AI identify clauses, key dates, contracted rates and obligations, and officers can ask questions of a contract in plain language. A rules engine compares what was agreed with what is happening, such as invoice prices against contract rates, and routes any variance through a configurable approval workflow. Insight dashboards give managers a view of milestones, obligations and bottlenecks across the whole contract portfolio.
