Invoice accuracy with zero double payments
100%

Reduce accounts payable workload by
30%

Straight-through processing achieved
90%

Why

A compliant invoice needs correct supplier details, a valid tax invoice with GST shown properly, a matching purchase order or contract and an approver with the right delegation. Accounts payable teams check all of this by hand across paper, PDF and e-invoices, often while working to prompt payment targets.

Duplicate invoices slip through and turn into double payments. Fraudsters target accounts payable with fake bills and changed bank details, and the National Anti-Scam Centre reported $166 million lost to payment redirection and false billing scams in 2025.

Tungsten InvoiceAgility and AP Essentials capture invoices in any format and run tax, compliance and fraud checks in real time. Configurable business rules match each invoice to purchase orders and supplier records, flag duplicates and route exceptions to the right approver. Clean invoices post straight to the ERP with a full audit trail.

How

Myhealth Medical Group, which runs 100 clinics across three eastern Australian states, once processed invoices manually from a shared drive. Its old scanning tool lacked accuracy, and double payments were an ever-present risk.

Working with partner Topline Co, Myhealth went live with Tungsten AP Essentials and Microsoft Dynamics 365 in two months. Every invoice is now captured and checked automatically before posting. Since go-live Myhealth has recorded **100% accuracy with no double payments**, and the AP team spends **30% less time on invoice processing** even though volumes grew from 1,500 to 2,000 invoices a month. Clinic managers track invoice status on one central dashboard instead of phoning head office.

In the UK, Imperial College London processes 85% of its invoices electronically through Tungsten. The college reached **90% straight-through processing** and cut the cost of each transaction from £2.50 to below £1.00.
