Generative AI

- Commonwealth agencies pay e-invoices within 5 days
- NZ: 95% of e-invoices paid within 5 business days
- 430,000+ Australian businesses on Peppol
- Under $10 to process each e-invoice (ATO estimate)
- Certified Peppol access point that connects to any ERP

Why

Peppol is the international e-invoicing standard adopted by Australia and New Zealand. Invoices travel as structured data between accredited access points, straight from the supplier's software into the buyer's, with nothing to scan or rekey.

Both governments now expect agencies to use it. Since July 2022, non-corporate Commonwealth entities must use e-invoicing and pay e-invoices within 5 days, compared with 20 days for other invoices. In New Zealand, mandated agencies must send and receive e-invoices and, from January 2026, pay 95% of them within 5 business days.

The ATO estimates a paper or PDF invoice costs $27 to $30 to process, and e-invoicing brings that below $10. Structured data from known senders also lowers the risk of fake invoices and payment redirection.

How

Tungsten e-Invoice Connect is a certified Peppol access point delivered as multi-tenant SaaS. Its open 4-corner and 5-corner architecture exchanges invoices over Peppol and other e-invoicing networks. A validation rules engine checks each invoice on arrival, for example against active purchase order numbers, and returns incomplete invoices to the sender automatically.

Structured data then flows into any ERP or billing system, or into Tungsten InvoiceAgility, which handles Peppol invoices alongside paper and PDF in a single workflow. Self-service tools let agencies invite suppliers in batches, track acceptance and send reminders to anyone who has not responded.

The U.S. Department of Veterans Affairs Financial Services Center shows what a managed rollout delivers. Through the Tungsten e-Invoice Network it has onboarded **more than 26,000 suppliers** and receives **650,000 e-invoices a year**. Electronic submissions rose from 28% to over 75% after the agency mandated e-invoicing, and vendors can be paid within 15 days, which supports its compliance with the US Prompt Payment Act.
